# CONCEPT

A Jetpack game, similar to flappy bird and Jetpack Joyride. The player has 3 lives and an enemy who tries to constantly hit the player. The player has to navigate around obstacles, trying to miss the enemy while doing so. The score shows the user how far they came, before dying.

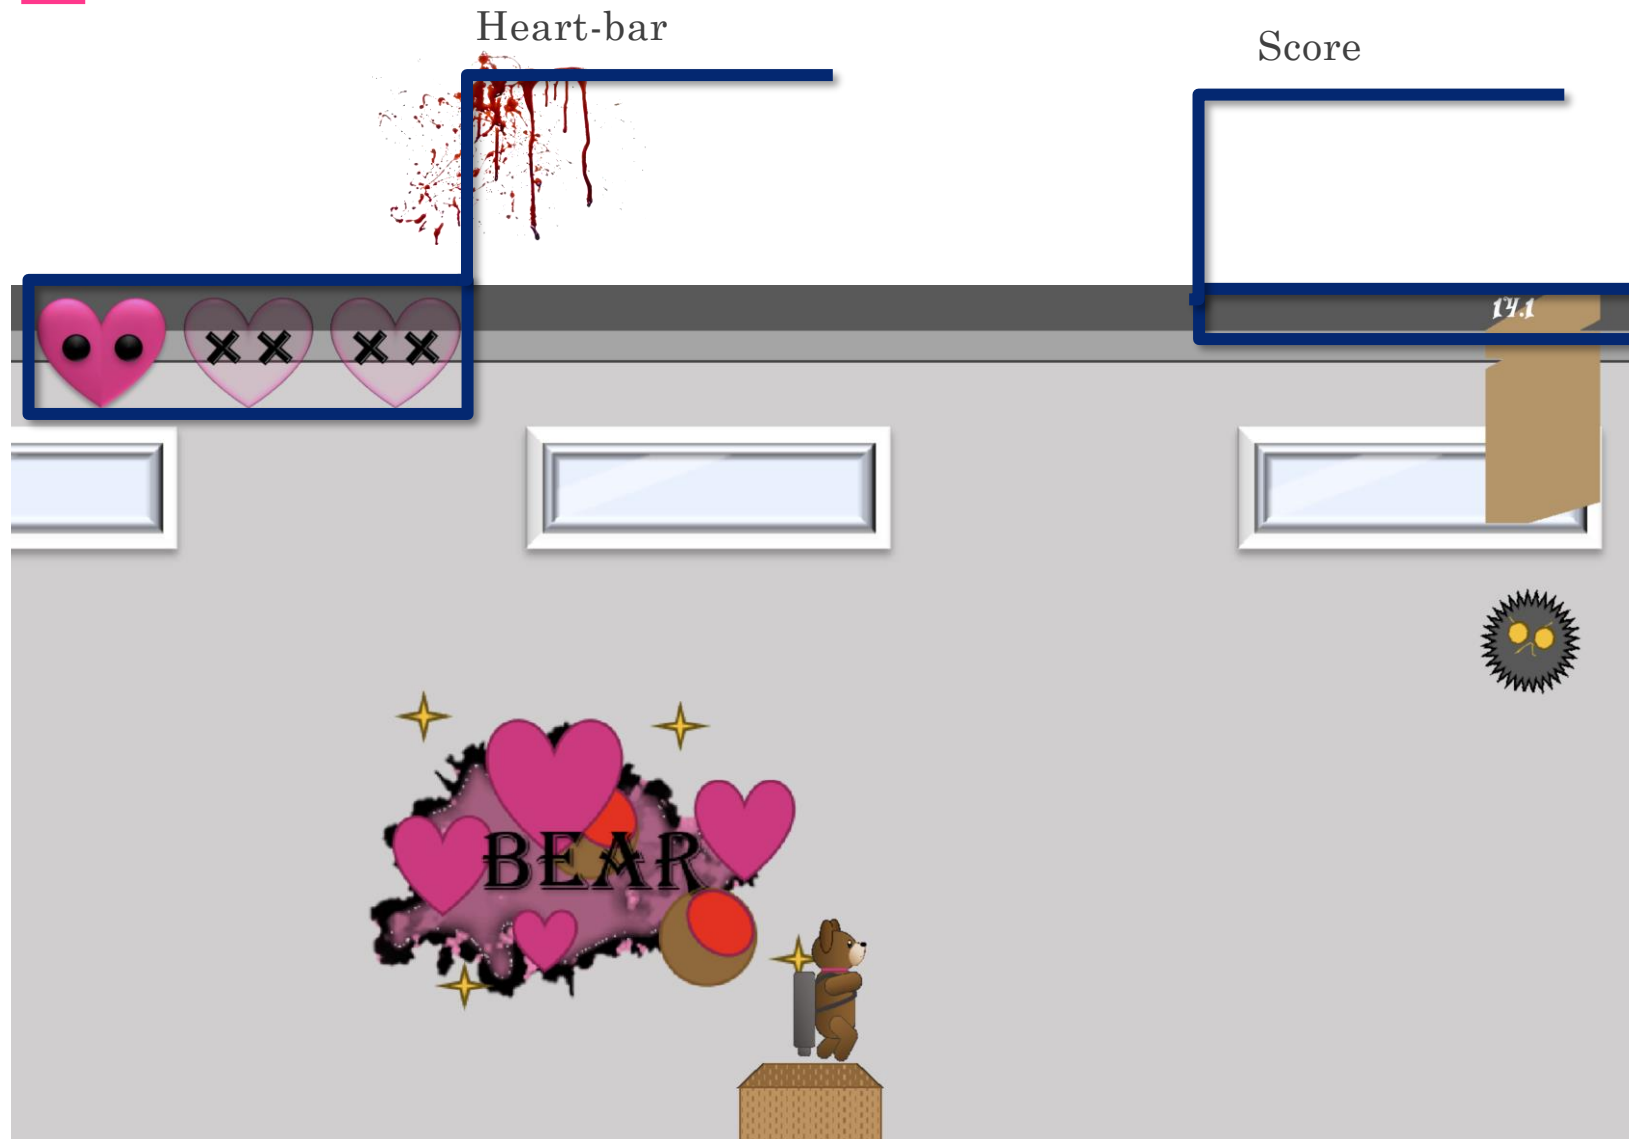

# CONTROLS

The user has to use/hold the space bar, to give the bear a force to fly upwards. He automatically falls due to gravity and moves to the right. It is a very simple control.

# VUI

# CONCEPT-ART

The following pictures are a representation of my first idea.

# SPRITES

The spritesheets were designed by myself:
